

An underwater photograph of a rocky seabed covered in green algae and several sea urchins. Some urchins have reddish-brown spines, while others have dark purple spines. The scene is dimly lit, with light filtering through the water.

Summer at Rosario Beach Marine Laboratory

By: Makenna Middleton

Octopuses in bottles were collected and transferred to Nalgene bottles.

Marine organisms were collected for the summer classes.

Scallops were collected to see food preference of a Giant Pacific Octopus.

Observational dives were conducted to see how the populations and ecosystems were changing.

Bottles were collected and cut to act as new octopus homes.

Organisms were returned or given to researchers and aquariums.
